## SKILLS

Android

Java

Kotlin

ASP.NET

Python

CSS

Javascript

Leadership

Creative

Teamwork

## PROJECTS

### Bangla GPT (Android)

I made a replica of Chat GPTs android app using android studio. In the app I had to integrate Chat GPT API for the implementation of bot response. The UI is well furnished and it works like a charm. Source code can be found in my Github profile.

### E-Sheba/Bangladesh Railway (XAMPP)

Developed a comprehensive replica of the E-Sheba website, a prominent online platform in Bangladesh using PHP, Javascript, CSS and HTML. Leveraged MySQL for database management, ensuring secure and efficient data storage and retrieval. The project involved meticulous attention to detail in user interface design, seamless functionality, and a user-friendly experience.

### Zero Hunger (ASP.NET)

Built a website for an organization using ASP.NET and MySQL. ensured a responsive and feature-rich platform while integrating MySQL databases to manage and optimize critical data. Collaborating cross-functionally, I executed frontend design using HTML, CSS, and JavaScript, resulting in an intuitive user interface.
